

Freitag, 8.11.2002, Meeting Point: 09:30 - 12:30 Uhr

Lotus Collaboration into the J2EE World

David Teboul, IBM France, Paris

During this session will be covered:

Building e-Business apps combining the powerful transaction capabilities of WebSphere with the rich Content Management, Workflow, and messaging capabilities of Lotus Domino.

Integration Technics - J2EE/Web Services and Lotus technologies - how to leverage the Lotus investment.

Technical Roadmap around Lotus and J2EE/Web Services

David Teboul

currently works as a Lotus EMEA Technical Advocate within the IBM Software Group. His prime focus area is Collaborative eBusiness. David and his team missions are to accelerate the implementation of Lotus technology, to support major strategic Lotus opportunities and to drive emerging business on new technologies such as Advanced Collaboration, Mobile & Wireless, Collaborative eBusiness, Knowledge Management and e-Learning in EMEA. In this Team, David's responsibilities includes areas such as Contextual Collaboration, Domino and WebSphere/J2EE integration, Portals, and I*net Application Development Technologies. He also makes sure that Lotus Development labs well understands the specific EMEA customer product requirements in order to implement them into the Lotus Product Line.

Before joining Lotus in 1998, David worked since 1994 in IBM where he held several Technical positions. In particular, as a I*net Specialist he participated in the design and implementation of several major Internet projects within eBusiness Services in France and in the US and as a System Engineer, he supported technical pre-sales around emerging I*net Technologies within the Internet Solution Team on AIX.
